

Research Assessment Committee

*Criteria for the issue of research
accreditations*

September 2017

Summary

Field of Humanities	3
Field of Social Sciences	6
Field of Sciences	9
Field of Life Sciences.....	11
Field of Medical and Health Sciences	13
Field of Engineering and Architecture	16

Field of Humanities

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Humanities will assess the applicants' research activity carried out to date, their activity in research training, development, management and administration, and other merits in general. Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The basic assessment areas and the criteria for each one of them are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

In journals

With respect to articles, value will be placed basically on publications in journals that have undergone a peer-review assessment process and that appear in citation indexes – such as those of Clarivate Analytics (and particularly the Social Science Citation Index and the Arts and Humanities Citation Index) or Scopus – or in other specialised bibliographic databases of international prestige. In order to specify the effective repercussion of the research carried out by the applicant, consideration will be given whenever possible to the position of the journal in journal assessment repositories (which provide rankings by impact index or by other assessment criteria), and to the number of citations received by each article. Assessment will also be made of the degree of creativity, thematic diversity and innovation of the applicant's research.

The AQU Catalunya assessment system establishes three categories of journals (A, B and C), according to the following classification:

- A) Journal of international scope, of the highest level of quality within its discipline, appearing in selective citation indexes and situated in journal assessment and classification repositories in the highest positions.
- B) Journal of international scope, appearing in selective citation indexes and situated in journal assessment and classification repositories in lower positions than those of group A.

B) Journal of international scope not appearing in selective citation indexes but acknowledged as being on the highest level of quality within its field and possessing a rigorous system of assessment of originals and an international scientific committee.

C) Journal of a good level of quality within its field, with a rigorous assessment system.

Applicants should have at least 10 articles of the categories described above, and at least four of them should be of Category A or B.¹

Deficiencies relating to quantity may be compensated by merits of very high or exceptional quality in the form of publications in which the applicant is the principal and corresponding author. The quality should be duly justified and proven by indicators and verified repercussion evidence² provided by the applicant.

In books and chapters of books

With respect to the publishing of books, value will be placed on those of original character (where the applicant is the author or co-author and/or the editor of a multi-author book) published by specialised publishing houses. Two assessment levels are defined for books:

1. Books published by international publishing houses of acknowledged prestige.
2. Books published by prestigious publishing houses of national scope with rigorous selection criteria.

Quality books may be assimilated to articles in specific fields.

With respect to the transfer of research results, value will be placed on those results for which either the fact that they are currently being used can be demonstrated by the applicant, or for which the process for the international protection of rights is sufficiently advanced in order that the Committee may assess the real interest of the application.

Direction of and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (International, European, State and Autonomous Regional) and the private sector (foundations, companies, etc.), assessing their results and their impact in the respective field. Value will be placed, particularly, depending

¹ These are not required absolute minimums but rather a general reference in the field of Humanities, which will be compared in each case with the average quality of the applicants' publications and the average productivity in the respective area.

² The term 'repercussion evidence' is considered more precise than the term 'impact' since it allows consideration of other elements aside from the impact of journals (citations, reviews, influence index of journals or authors, etc.).

on the area of specialisation, on the number and importance of the projects in which the applicant has participated. In this respect, it will be necessary for the applicant to have participated and contributed in at least one competitive research project. Value will also be placed on the degree of leadership and the initiative shown in generating new projects.

Training activity

Value will be placed on applicants' capacity to form a research group or nucleus and on their having directed and/or currently directing doctoral theses. Value will also be placed on applicants' involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses), reports issued by academics of acknowledged prestige, institutional activity in research promotion and management, etc. With respect to research stays, special value will be placed on the circumstance of their having been scientifically productive.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	70%
2. Projects	15%
3. Training activity	7,5%
4. Other merits	7,5%

Each of the areas will be assessed on a scale of 10 points.

Field of Social Sciences

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Social Sciences will assess the applicants' research activity carried out to date, their activity in research training, development, management and administration, and other merits in general. Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The basic assessment areas and the criteria for each one of them are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

In journals

Value will be placed equally and jointly on the publications and the transfer of research results.

With respect to articles, value will be placed basically on publications in journals that have undergone a peer-review assessment process and that appear in citation indexes – such as those of Clarivate Analytics (in particular the Social Science Citation Index and the Arts and Humanities Citation Index) or Scopus – or in other specialised bibliographic databases of international prestige. In order to specify the effective repercussion of the research carried out by the applicant, consideration will be given whenever possible to the position of the journal in journal assessment repositories (which present rankings by impact index or by other assessment criteria), and to the number of citations received by each article. Assessment will also be made of the degree of creativity, thematic diversity and innovation of the applicant's research.

The AQU Catalunya assessment system establishes three categories of journals (A, B and C), according to the following classification:

- A) Journal of international scope, of the highest level of quality within its discipline, appearing in selective citation indexes and situated in journal assessment and classification repositories in the highest positions.
- B) Journal of international scope, appearing in selective citation indexes and situated in journal assessment and classification repositories in lower positions than those of group A.

B) Journal of international scope not appearing in selective citation indexes but acknowledged as being on the highest level of quality within its field and possessing a rigorous system of assessment of originals and an international scientific committee.

C) Journal of a good level of quality within its field, with a rigorous assessment system.

Applicants should have at least 10 articles of the categories described above, and at least four of them should be of Category A or B.3

Deficiencies relating to quantity may be compensated by merits of very high or exceptional quality in the form of publications in which the applicant is the principal and corresponding author. The quality should be duly justified and proven by indicators and verified repercussion evidence provided by the applicant.

In books and chapters of books

With respect to the publishing of books, value will be placed on those of original character (where the applicant is the author or co-author and/or the editor of a multi-author book) published by specialised publishing houses. Two assessment levels are defined for books:

1. Books published by international publishing houses of acknowledged prestige.
2. Books published by prestigious publishing houses of national scope with rigorous selection criteria.

Quality books may be assimilated to articles in specific fields.

With respect to the transfer of research results, value will be placed on those results for which either the fact that they are currently being used can be demonstrated by the applicant, or for which the process for the international protection of rights is sufficiently advanced in order that the Committee may assess the real interest of the application.

Direction and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (International, European, State, Autonomous Regional) and the private sector (foundations, companies, etc.), assessing their results and their impact in the respective field. Value will be placed, particularly, depending on the area of specialisation, on the number and importance of the projects in which the applicant has participated. In this respect, it will be necessary for the applicant to have participated in at least one competitive research project. Value will also be placed on the degree of leadership and the initiative shown in generating new projects.

³ These are not required absolute minimums but rather a general reference in the field of Social Sciences, which will be compared in each case with the average quality of the applicants' publications and the average productivity in the respective area.

Training activity

Value will be placed on applicants' capacity to form a research group or nucleus and on their having directed and/or currently directing doctoral theses. Value will be placed on applicants' involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses), reports issued by professionals of acknowledged prestige, institutional activity in research promotion and management, etc. With respect to research stays, special value will be placed on the circumstance of their having been scientifically productive.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	70%
2. Projects	15%
3. Training activity	7,5%
4. Other merits	7,5%

Each of the areas will be assessed on a scale of 10 points.

Field of Sciences

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Sciences will assess the applicants' research activity carried out to date, their activity in research training, development, management and administration, and other merits in general. Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The basic assessment areas and the criteria for each one of them are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

Value will be placed equally and jointly on the publications and the transfer of research results.

With respect to articles, value will be placed basically on publications in journals that have undergone a peer-review assessment process and that appear in citation indexes such as the Science Citation Index Expanded. It is considered necessary that the total number of quality publications shall be about 15 or more.⁴

As a general principle, quality (demonstrated by objective internationally accepted parameters) will prevail over quantity. Specifically, deficiencies relating to quantity may be compensated by merits of very high or exceptional quality in the form of publications in which the applicant is the principal and corresponding author. The quality should be duly justified and proven by indicators and verified repercussion evidence provided by the applicant.

In order to specify the effective repercussion of the research carried out by the applicant, consideration will be given whenever possible to the position of the journal in journal assessment repositories (such as the Journal Citation Reports) which present rankings by impact index, and to the number of citations received by each article.

When a substantial fraction of the research activity of the applicant has been carried out into a collaborative research model, the applicant should provide objective indicators of his or her personal contributions.

⁴ These are not required absolute minimums but rather a general reference in the field of Sciences which will be compared in each case with the average quality of the applicants' publications and the average productivity in the respective area.

With respect to the publishing of books, special value will be placed on original books (where the applicant is the author and/or the editor of a multi-author book) published by specialised publishing houses of international prestige.

With respect to the transfer of research results, value will be placed on those results for which either the fact that they are currently being used can be demonstrated by the applicant, or for which the process for the international protection of rights is sufficiently advanced in order that the Committee may assess the real interest of the application.

Direction of and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (international, European, State, Autonomous Regional) and the private sector (foundations, companies, etc.).

Training activity

Value will be placed on applicants' capacity to form a research group or nucleus and on their having directed and/or currently directing doctoral theses. Value will be placed on applicants' involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses), reports issued by academics of acknowledged prestige, institutional activity in research promotion and management, etc. With respect to research stays, special value will be placed on the circumstance of their having been scientifically productive.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	75%
2. Projects	10%
3. Training activity	10%
4. Other merits	5%

Each of the areas will be assessed on a scale of 10 points.

Field of Life Sciences

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Life Sciences will assess the applicants' research to date as well as other merits of research management and administration. Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The assessment criteria and areas are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

Value will be placed equally and jointly on the publications and the transfer of research results.

With respect to articles, value will be placed basically on publications in journals that have undergone a peer-review assessment process and that appear in citation indexes such as the Science Citation Index Expanded. The number of publications necessary will be about 20 or more.⁵ Special value will be placed on the circumstance of about 10 of the publications belonging to the first quartile of the respective category of the Journal Citation Reports, and on the applicant's being the corresponding author or first or last signatory⁶ of 50% of them (five). Exceptionally, the Committee may place value on articles in other quartiles. As a general principle, quality demonstrated by objective internationally accepted parameters, will prevail over quantity, as long as the applicant is the first author, last author or corresponding author.

In order to specify the effective repercussion of the research carried out by the applicant, whenever possible, consideration will be given to the percentage of distribution by quartiles of the Journal Citation Reports where the applicant's articles appear and to the number of citations received for each article, as evidence of the repercussion of the applicant's research. Assessment will also be made of the degree of creativity, thematic diversity and innovation of the research.

With respect to the publishing of books, special value will be placed on those of original character (when the applicant is the author and/or the editor of a multi-author book) published

⁵ These numbers are not intended as required minimums, but rather as recommendations. In the event that the applicant does not reach this threshold, the rest of contributions will be considered.

⁶ See note 4.

by specialised publishing houses, placing greater value, if appropriate, on the books published by publishing houses of international prestige.

With respect to the transfer of research results, value will be placed on those results for which either the fact that they are currently being used can be demonstrated by the applicant, or for which the process for the international protection of rights is sufficiently advanced in order that the Committee may assess the real interest of the application.

Direction of and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (International, European, State, Autonomous Regional) and the private sector (foundations, companies, etc.). Consequently, non-competitive grants, of contractual nature, are excluded. Value will be placed, particularly, depending on the area of specialisation, on the number and importance of the projects of which the applicant has been the Principal Investigator (PI). The applicant shall have been the PI in one research project that is, if possible, currently under way. Assessment will also be made of the capacity to obtain resources, the degree of leadership, and the initiative shown in generating new projects.

Training activity

Value will be placed on the applicants' capacity to form a research group or nucleus and on their having directed and/or currently directing doctoral theses. Value will also be placed on applicants' involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses), reports issued by academics of acknowledged prestige, institutional activity in research promotion and management, etc. With respect to research stays, special value will be placed on the circumstance of their having been scientifically productive.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	70%
2. Projects	15%
3. Training activity	10%
4. Other merits	5%

Each of the areas will be assessed on a scale of 10 points.

Field of Medical and Health Sciences

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Medical and Health Sciences will assess the applicants' research to date as well as other merits of research management and administration. Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The assessment criteria and areas are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

Value will be placed equally and jointly on the publications and the transfer of research results.

With respect to articles, value will be placed basically on original articles in journals which have undergone a peer-review assessment process and which appear in citation indexes such as the Science Citation Index Expanded. The minimum number of publications should be about 20 or more.⁷ Special value will be placed on the circumstance of about 10 of the publications belonging to the first quartile of the respective category of the Journal Citation Reports and on the applicant's being the first author, last author or corresponding author of 5 of them.⁸

In order to specify the effective repercussion of the research carried out by the applicant, consideration will be given whenever possible to the percentage of distribution by quartiles of the Journal Citation Reports where the applicant's articles appear and to the number of citations received for each article, as evidence of the repercussion of the applicant's research.

In the case of distinctive subject areas that are identified as such by the Committee, due to their explicit emerging or multidisciplinary nature, the classification in quartiles generated *ad hoc* with data of the Journal Citation Reports based on the selection of titles which the Committee considers to be representative of the specific area of knowledge will be used.

As a general principle, quality, demonstrated by objective internationally accepted parameters, will prevail over quantity, as long as the applicant is the first author, last author or corresponding author.

⁷ These numbers are not intended as required minimums, but rather as recommendations. In the event that the applicant does not reach this threshold, the rest of contributions will be considered.

⁸ See Note 6.

Special value will be placed on those of original character (when the applicant is the author and/or the editor of a multi-author book) published by specialised publishing houses, placing greater value, if appropriate, on the books published by publishing houses of international prestige.

With respect to the transfer of research results, value will be placed on those results for which either the fact that they are currently being used can be demonstrated by the applicant, or for which the process for the international protection of rights is sufficiently advanced in order that the Committee may assess the real interest of the application.

Direction of and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (International, European, State, Autonomous Regional) and the private sector (foundations, companies, etc.). Consequently, non-competitive grants, of contractual nature, are excluded. Value will be placed, particularly, depending on the area of specialisation, on the number and importance of the projects of which the applicant has been the Principal Investigator (PI).

The applicant should have been the PI in a competitive research project, if possible in progress. Value will also be placed on the capacity to raise funds, the degree of leadership, and the initiative in generating new projects.

Training activity

Value will be placed on the applicants' capacity to form a research group or nucleus and on their having directed and/or currently directing doctoral theses. Value will also be placed on applicants' involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses), reports issued by academics of acknowledged prestige, institutional activity in research promotion and management, etc. With respect to research stays, special value will be placed on the circumstance of their having been scientifically productive.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	70%
2. Projects	15%
3. Training activity	10%
4. Other merits	5%

Each of the areas will be assessed on a scale of 10 points.

Field of Engineering and Architecture

For the issue of research accreditation, the Committee for the Accreditation of Research in the Field of Engineering and Architecture will assess the applicants' research to date as well as other merits of research management and administration.

In the field of Architecture, assessment will also be made of the international recognitions of the applicants' work, their recognised prizes, the circumstance of their having been published, and the circumstance of their having acted as curators of exhibitions.

Consideration will be given to the temporality of the scientific task carried out and, especially, to the applicants' career in recent years. The assessment criteria and areas are as follows:

Scientific career

Applicants shall demonstrate a proven teaching and research capacity, in accordance with Section 46 of Act 1/2003, dated 19th February, on universities of Catalonia. With respect to research capacity, applicants shall demonstrate, as a minimum, three years of post-doctoral research activity in order to be accredited.

Publications and transfer of research results

Value will be placed equally and jointly on the publications and the transfer of research results.

In the areas of specialisation in which there are indicators admitted by the academic, scientific and professional community, such indicators will be used. Otherwise, consideration will be given to the criteria of originality, significance, quality and repercussion of the work.

As an indicator of the dissemination and impact of the publications in journals, it will be verified that they are indexed in the thematic categories pertaining to the areas of Engineering and Architecture of the citation indexes Science Citation Index Expanded (SCIE), Social Sciences Citation Index (SSCI) and Arts and Humanities Citation Index (AHCI). In the case of journals indexed in SCIE and SSCI, the information appearing in the Journal Citation Reports (JCR) allows classification of the titles in quartiles according to their relative volume of citation, which is considered another quality indicator of the medium in which they are published.

In the assessment process, a guideline indicator of an acceptable level of scientific and technical publications is the authorship of eight contributions of quality and articles published in journals of recognised standing. In the case of the latter (published articles), only articles that appear in the listings of the subject areas of the JCR that correspond to the applicant's specialised field are considered.

This is not an absolute number but rather a general reference. Additionally, value will be placed on the circumstance of more than half of the publications belonging to the first quartile of the respective area and on the applicant's being the first signatory or principal investigator. As a

general principle, quality (demonstrated by objective internationally accepted parameters) will prevail over quantity. Specifically, deficiencies relating to quantity may be compensated by merits of very high or exceptional quality in the form publications in which the applicant is the principal and corresponding author. The quality should be duly justified and proven by indicators and verified repercussion evidence provided by the applicant. Moreover, in order to specify the effective repercussion of the research carried out by the applicant, consideration will be given whenever possible to the number of citations received. Consideration may also be given to the patents in operation.

The proceedings of congresses published with ISSN will not be considered publications in journals, even if they are indexed in SCIE, SSCI or AHCI. Such congress proceedings, the same as those referenced in databases such as the Conference Proceedings Citation Index of Clarivate Analytics and similar ones, will have only a complementary consideration with respect to the publications in indexed journals.

With respect to the publication of books, value will be placed especially on those of original character (where the applicant is the author or co-author and/or the editor of a multi-author book, excluding the publication of proceedings of congresses) published by specialised publishing houses, placing greater value, if appropriate, on those published by publishing houses of international prestige.

Direction of and participation in research projects

Consideration will be given solely to the research projects financed within the frame of competitive grant programmes of both the public Administrations (European, State, Autonomous Regional) and the private sector (foundations, companies, etc.). It will be necessary for the applicant to have directed or participated in research projects approved in public competitive grant programmes, especially those financed in national or international programmes. Only in special highly justified cases may this condition be compensated by others of significant merit. The importance of the projects will be assessed by their financial value and by the publications in journals and the patents that they have generated. Assessment will also be made of the capacity to obtain resources, the degree of leadership, and the initiative shown in generating new projects.

Training activity

Value will be placed on the applicant's capacity to form a research group or nucleus and to contribute actively to the training of researchers. Assessment will also be made of the doctoral theses that the applicants have directed and their involvement in the teaching and/or co-ordination of doctorate, post-graduate and Master's courses.

Other merits

The Committee will assess all the other merits that the applicants submit, such as research prizes or awards, acknowledged stages of research, guest conferences at congresses or universities, research stays, positions of scientific responsibility (editorial committees, international and national scientific committees, organisation/chairing of congresses, publication of proceedings of congresses), reports issued by academics of acknowledged prestige, institutional activity in research promotion and management, etc. Research stays at centres of international prestige will be assessed whenever they have been for a length of over one month, during both the pre-doctoral and post-doctoral periods, and represent a significant contribution to the applicant's training or specialisation as a researcher.

Weighting of each area

The weighting of each area in the final score will be as follows:

1. Publications and transfer of research results	70%
2. Projects	15%
3. Training activity	10%
4. Other merits	5%

Each of the areas will be assessed on a scale of 10 points.

Specific considerations for the field of architecture

While the foregoing criteria are applicable, from the conceptual standpoint, in the field of Architecture, the following specific aspects will be taken into account because of the characteristics that distinguish Architecture from Engineering:

It must be understood that, with respect to **Publications**, measurement is made of the incidence of a researcher's activity on the experts in an area. In this respect, the closest parallel in the field of Architecture would be the capacity of a thoughtful professional to contribute, with his or her contributions, to the advance and shaping of knowledge. To the extent that these contributions sketch out some precise guidelines, are the object of a reflexive conceptualisation and have an influence on the evolution of the world of Architecture, they may be assessed as publications. The transfer of research results contributed by the applicant will also be assessed in this area.

Within the **Projects** area, measurement is made of the capacity to define objectives, establish the strategies necessary to achieve them, and mobilise the pertinent human resources. On the basis of this principle, the acceptance of projects may be broadened in the field of Architecture to include more diverse activities, as long as they present the three aforementioned aspects and are of an entity comparable to that described in the area of **Direction of and Participation in Research Projects**.

The area of **Other Merits** may include significant aspects of the field of Architecture that are without parallel in other fields. In the absence of more objective measures, architects are accustomed to, and find completely acceptable, assessment by all types of panels and juries. The placement of their effort in the hands of a group of prestigious professionals is the usual way of obtaining commissions, winning competitive biddings, participating in exhibitions or having their works published. For this reason, in this area, all these formulas of competition and jury must be included, with a change in the weightings set out above.

Consequently, in the field of Architecture, the following weighting of merits will be applied:

1. Publications and transfer of research results	50%
2. Projects	10%
3. Training activity	20%
4. Other merits	20%

Each of the areas will continue to be assessed on a scale of 10 points.
